

## A WORLD OF PLASTIC SURFACE PROTECTION SOLUTIONS.

As the demand for innovative uses of plastic continues to grow, so does the need for dependable surface protection solutions. Our product offering, the industry's broadest, insures we'll always meet your toughest fabrication, handling, storage and shipping challenges. You can rely on Novacel's complete line of adhesive films along with innovative coextruded films for all your protection needs. Whether your application is in sheet or roll form, an extrusion or molded part, Novacel will have the solution you need to protect your product without fear of costly damage.

Only Novacel has the years of experience and breadth of products to stay ahead of the continual advancement of manufacturing methods and challenges facing today's more sophisticated plastic manufacturers and their end users. Smooth, textured, and coated surfaces such as Polycarbonate, Acrylic, PETG, and PVC are just a few of the surface types we regularly protect. When it comes to rigorous fabrication processes like sawing, drilling, routing, line bending, thermoforming, screen-printing, you can trust Novacel to work with you to recommend a comprehensive and cost-effective surface protection solution.

Our products are backed by the industry's best technical expertise and an R&D effort that matches substrates and adhesives to your manufacturing methods and your end users' requirements. That's why so many plastics manufacturers, of all types, have come to rely on Novacel for their surface protection solutions.

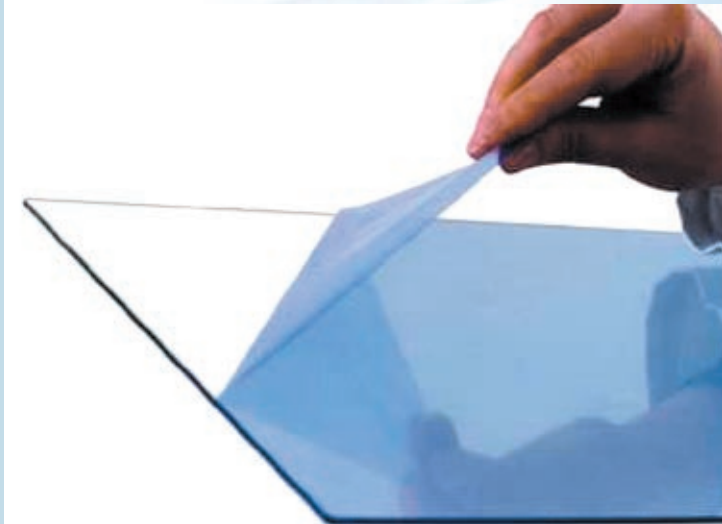

**COATED ADHESIVE FILM**

Our protective films apply easily without wrinkling or bubbling and maintain their adhesion levels for easy removal, without haze or adhesive transfer, to maintain production levels. Our films also withstand the rigors of manufacturing. They provide excellent printing surfaces for advertising, instructions and brand identification and accept handwriting. Because they act as a lubricant, our surface protection films can actually prolong the life of production tools.

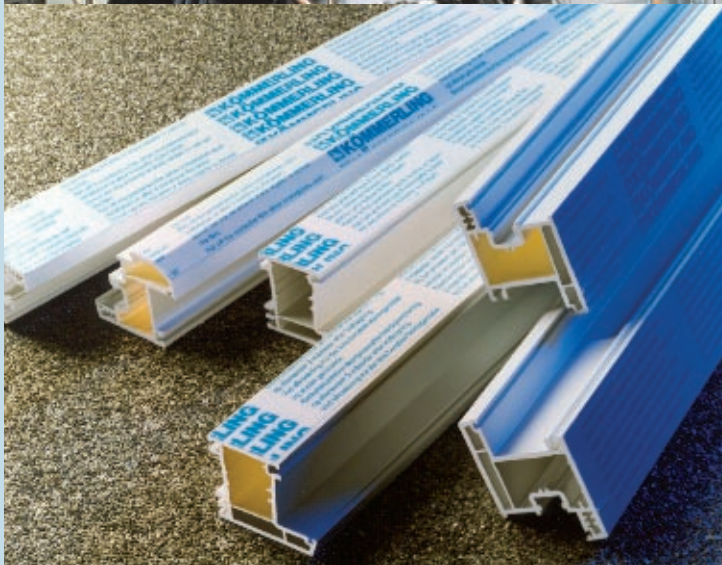

**COEXTRUDED ADHESIVE FILM**

Novacel has the capability to prototype new products to meet your unique applications. Coextruded films offer outstanding abrasion resistance and remove quickly without leaving any residue. Our films have a specially formulated slip backing layer that makes part stacking easier, and they withstand thermoforming processes.
